2x (TV Plastic Cap)
2x (TV Plastic washer)
2x (M8X40)

2x (M8X25)
2x (M6X30)
2x (M5X30)
2x (M4X30)
1: Plug Lift to Wall

A) Pull the power cord out of one of the two holes in the back or bottom of the cabinet. Choose the exit hole that will be nearest your wall outlet.

B) HEAVY! You will need assistance with this step.

Using two people, slide the cabinet into place.
2: Raise Lift

A) Raise the lift by pressing and holding UP switch.

-OR-

Using the remote, press and release the UP button on the remote control unit.
* Do not push and hold the remote buttons.

(See page 7 if remote does not work.)
3: Mounting Your TV

A) Remove the stand from your TV.

B) Measure the distance from the bottom of your TV to the middle of the threaded insert on the back of your TV.

NOTE: Use the top threaded holes and not the bottom holes.

C) Adjust the mounting bracket to the measurement calculated in “B” by simply pulling or pushing the horizontal pressure mounted bracket into place.
Using two people, place the TV on the padded lift platform and attach to the mounting bracket using the supplied plastic caps, washers, and bolts.

**WARNING**
You should not feel resistance when threading bolts into the back of the televisions. If you feel resistance, stop immediately and call Customer Service: 561-417-0999.

**HEAVY!** You will need assistance with this step.

**Note:** If you would like your TV to raise the greatest distance above the cabinet, or if you do not want the machine to show above the TV, you will need to raise the platform. Simply loosen the 2 allen bolts, raise the platform so the distance from the platform to the top of the machine is equals to your TV height + 1/4”.
E) Plug TV into the outlet labeled “(IR) current sensing” located on the manual control box. This allows most TV’s to automatically lower when the TV powers off. If you prefer for the TV not to lower when TV is turned off, plug the TV directly into the wall.

Note: If this feature causes your lift to move up/down unnecessarily, plug the TV directly into an outlet not on the lift machine.

F) Using the **manual controls**, drive the lift down into the cabinet.

---

**CAUTION**

Watch carefully to see that all wires and cords are not rubbing on the lift and or cabinet and that they are not being pulled. Use wire management clips as needed to keep wires from being tangled or entrapped.
4: Syncing Your Remote Control
If It Is Not Working

If the manual up/down switches are operating your lift but the remote control is not, your remote has likely lost its connection to the lift. This can be corrected by syncing your remote with the lift as follows:

1. Drive the lift into the down position.
2. Turn the lift off on the manual control box.
3. Leave the lift off for 60-90 seconds minimum.
4. After 60-90 seconds has expired, press and hold the up button on the remote control.
   The blue light on the remote should stay on.
5. Keeping the remote’s up button depressed, turn the lift on.
6. After 2-5 seconds, the lift should begin running up.
7. Release the up button as soon as the lift begins to move.

4: Three Methods to Control Your Lift

1) Using the included radio frequency remote control.

2) Using the built-in contact closure.

Syncing Your Remote Control
If the manual up/down switches are operating your lift but the remote control is not, your remote has likely lost its connection to the lift. This can be corrected by syncing your remote with the lift as follows:

1. Drive the lift into the down position.
2. Turn the lift off on the manual control box.
3. Leave the lift off for 60-90 seconds minimum.
4. After 60-90 seconds has expired, press and hold the up button on the remote control.
   The blue light on the remote should stay on.
5. Keeping the remotes up button depressed turn the lift on.
6. After 2-5 seconds, the lift should begin running up.
7. Release the up button as soon as the lift begin to move.

Take control of your components

Infrared components require line of sight to operate via remote control. The TV Lift Cabinet infrared products provide a window from your handheld remote to your components that are out of the line of sight enclosed in our cabinetry.

Our Plasma/LCD/LED friendly IR receivers are compact and blend into our furniture very well.

While many consider infrared products to be accessories, TVLiftCabinet has a different approach. We view all are products as integral parts of the overall system. Therefore, all TV Lift Cabinet IR products are pre-installed with simple connections, engineered to integrate with a vast number of products and designed to perform with exceptional reliability.

Simply install your components on shelves that contain an emitter (equipment must be 1” or more behind the emitter) and you will have full control of that equipment from behind closed doors.

* Works with 99% of all equipment
6: Steps to Reverse Cabinet Over Drawers
(applies to certain models only)

1. Lift lid on the furniture.

2. Reaching your arm in, push the doors open.

3. Using the supplied wrench, remove all bolts by reach through the arm holes.

4. Lift and turn cabinet 180 degrees (do not drag cabinet over drawer box).

5. Re-insert and tighten bolts.

6. Open both drawers and plug the cables into the 2”X3” metal box bolted to interior wall. Insert the plugs into any emitter port.

You may also open the doors to help route your cables to and from the TV and equipment in drawers.

Our infrared system is designed to find your equipment in the drawers. There is nothing to attached or program.

Simply position your equipment a minimum of 1” behind the drawer face to allow the IR system to find your equipment.

Note:
Your cabinet is reversible. It may be used against the wall (drawer faces must be on the same side as TV screen) or at the foot of the bed (drawer faces must be on the opposite side of the TV screen).
